

**Seepage and Conveyance Technical  
Feedback Group**

July 6, 2011  
11704 Henry Miller Avenue  
Dos Palos, CA

---

---

---

---

---

---

---

---

**Agenda**

- Introductions and Technical Feedback Group (TFG) Purpose
- Action Item Review and Update
- 2011 Interim Flows
- Parcel Groupings for Further Evaluation
- Draft High Priority Project Locations
- Information & Data Exchange
- Next Steps and Follow Through

2

---

---

---

---

---

---

---

---

Review and Context

**TECHNICAL FEEDBACK  
GROUP OBJECTIVES**

3

---

---

---

---

---

---

---

---

### TFG Objectives

- Convey Interim and Restoration Flows while avoiding seepage impacts
- Identify potential projects that would avoid seepage impacts
- Identify locations for projects with potential for seepage impacts
- Develop a common understanding of the process, procedures and expectations for projects

4

---

---

---

---

---

---

---

---

### Process & Decision-making

- Monthly Meetings
  - Focused on Seepage Project Handbook and identifying projects to avoid seepage impacts
- Additional topics and meetings identified and considered as we proceed
  - Update Charter in Fall 2011
- Reclamation and its partner agencies retain decision authority for Program implementation

5

---

---

---

---

---

---

---

---

### Discussion Topics

Mar	Apr	June/July
<b>Projects Intro</b>		
Introduction Background Purpose Potential Projects	<b>Site Evaluation</b> Data Collection Investigations Groundwater Soil Salinity Conductivity Water Quality	<b>Plan Formulation</b> Project Types Site-Specific Considerations Selection Criteria

6

---

---

---

---

---

---

---

---

---

---

---

---

---

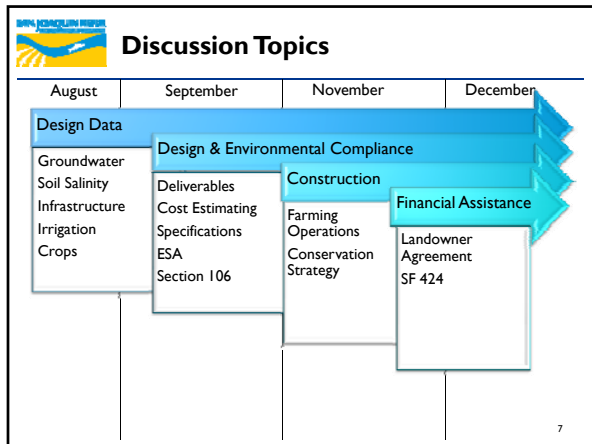

---

---

---

---

---

---

---

---

---

---

---

---

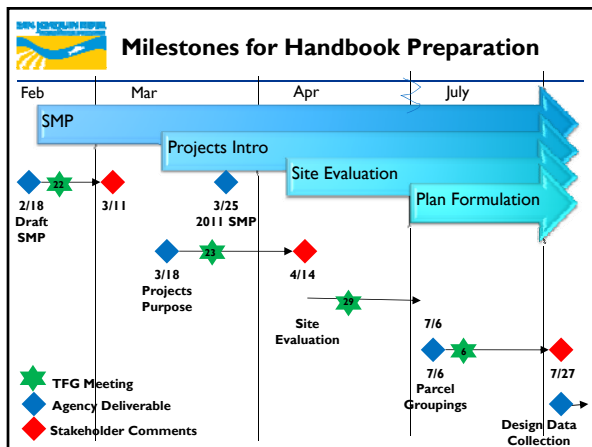

---

---

---

---

---

---

---

---

---

Review and Update

## ACTION ITEMS

10

---

---

---

---

---

---

---

---

---

---

 **Action Items**

Open Action Items	ID'ed	Due	Assigned to:	Status
1. Work Plan for additional tensiometer work to develop more data on capillary fringe	1/14/11	February 2011	Lee & Green	Need updated due date from Sarge.
2. Provide Monty and Chris with the excel files that the graphs are based on	2/10/11	3/10/11	Harrison	Pending
3. Add river mile station to river profile to link wells to locations	2/10/11	3/10/11	Harrison	Pending
4. Explore partnering on the cultural resources survey to expand the scope to go out beyond the levee to collect information that would help evaluate projects	2/10/11	3/10/11	Forsythe & White	Discussions underway with DWR.
5. Check that right of first refusal is offered to landowner	3/22/11	5/2/11	Mooney	Complete
6. Reclassify request for monitoring during floods as a hotline call. (Burkhart, Coburn, Nickel)	4/29/11	7/6/11	Mooney	Complete
7. Make CDEC streamgage info on stage consistently report in elevation	4/29/11			
8. Clarify the transition between flood and Interim Flows	4/29/11		Mooney	

11

---

---

---

---

---

---

---

---

---

---

 **Tensiometer Study**

- Reclamation is currently reviewing Sarge's draft plan
- Research – may not obtain decisive conclusions
- Suggested additions may include:
  - More specificity on site selection, including criteria for water table, crop, and distance from edge of field
  - Determinations of field capacity
  - Range in soil textures, USDA logs on site

12

---

---

---

---

---

---

---

---

---

---

**Spring 2011 Hotline Calls**

---

**SJRRP Seepage Site Visit Form**

Seepage Report ID Number: 2011-2

Date and Time of Site Evaluation: March 1, 2011

Names of personnel attending site evaluation, agencies belonging to and contact info (phone):  
Stephen Lee (Reclamation), Joe Brummer (CNS, consultant to Reclamation), Katrina Harrison (Reclamation), Dave Wooley (Reclamation), Shawn Coburn (landowner)

Landowner Name, phone, contact info: Shawn Coburn

**Seepage Location**

Address or Parcel:

River Mile (if known): 197.8

Approximate Distance from SJR: Well PZ-09-R3-5 is located in an elevated position on the river levee between the canal and the river. The well appears to be 4-5 feet higher than the field near soil boring PZ-09-R3-5-1.

Proximity to levee toe of most seepage (feet) – or through levee: No seepage

**2011 INTERIM FLOWS**

14

---

---

---

---

---

---

---

---

---

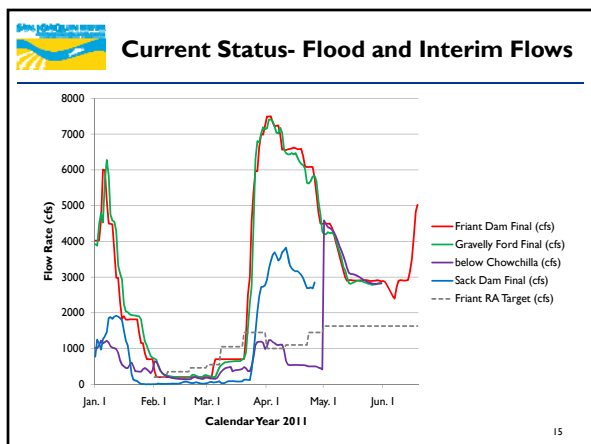

---

---

---

---

---

---

---

---

---

---

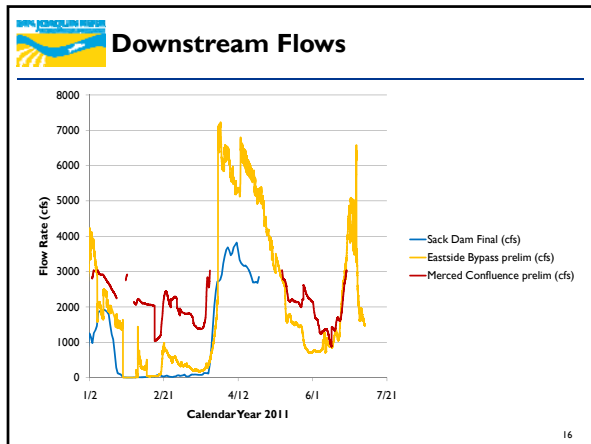

---

---

---

---

---

---

---

---

---

Katrina Harrison

**PARCEL GROUPINGS FOR FURTHER EVALUATION**

---

---

---

---

---

---

---

---

- 
- Elements of the Seepage Project Handbook**
- Introduction
  - Site Evaluation
  - Plan Formulation ← Today
  - Data Collection
  - Design
  - Environmental Compliance
  - Construction
  - Financial Assistance

---

---

---

---

---

---

---

---

 **Plan Formulation**

---

- 1) Divide project area into parcel groups
- 2) Initial existing data collection
  - Prioritize parcel groups for first tier of potential project locations; rule out others
- 3) Develop list of potential projects for a parcel group
  - Today: Walk through parcels adjacent to the SJRRP project area, have been divided into parcel groups,

19

---

---

---

---

---

---

---

---

 **Step I: Parcel Grouping Memo**

---

- Purpose: Divide the project area into manageable sections for initiating and tracking projects
- Criteria for Initial Parcel Grouping:
  - Ownership
  - Topography
  - Infrastructure
  - Level of flow where impacts may occur
  - Soil Texture

20

---

---

---

---

---

---

---

---

 **Step I: Parcel Grouping Memo**

---

- Parcel groups may become seepage projects
- SCTF Comments: Logical divisions where criteria change
- Next steps:
  1. Existing Data Review
  2. Decision on further evaluation
  3. Site Evaluation
  4. Potential Seepage Project

Legend

- Parcel Boundary
- Water
- Drainage
- Infrastructure
- Other

21

---

---

---

---

---

---

---

---

**Step 1: Parcel Groupings**

22

---

---

---

---

---

---

---

---

**Step 2: Initial Existing Data Collection**

- Purpose:
  - 1) Prioritize initial list of parcel groups for further analysis / rule out others
  - 2) Get initial list of potential projects on a specific parcel group
- Please add other information:
  - Historical flooding
  - High groundwater
  - No issues

23

---

---

---

---

---

---

---

---

**Step 2: Initial Existing Data Collection**

- Data includes:
  - Location information
  - Identified as historical seepage locations
  - Groundwater monitoring
  - Seepage observed from 2011 floods
  - Elevation
  - ID hydraulic modeling

24

---

---

---

---

---

---

---

---

 **Step 2: Initial Existing Data Collection**

---

- Please add other information:
  - Historical flooding
  - High groundwater
  - No concerns, continued monitoring
  - No further seepage consideration needed

25

---

---

---

---

---

---

---

---

 **Step 2: Initial Existing Data Collection**

---

Parcel Group 1

Reach: 3	Review:
River Mile: 203	<input type="checkbox"/> No Further considerations for seepage
Bank: Left	<input type="checkbox"/> No present concerns, continued monitoring
Area (acres): 1218	<input type="checkbox"/> Historical seepage or flooding observed, evaluation required
	<input type="checkbox"/> Interim Flows seepage, flooding, or shallow groundwater observed

Status:

Identified as parcel having historical seepage by: Landowner, RMC

Nearby Monitoring Wells: 365, 366, 363, 369, 361, 367

Shallowest Groundwater Level Measured: 4.8 feet below ground surface  
Measured on 8/17/2010 in Monitoring Well 364

Shallowest Groundwater Level Observed in 2011 (depth of surface ponding):  
Approximate Max Elevation (NAVD 88): Max Flow (cfs):

26

---

---

---

---

---

---

---

---

 **Step 3: Initial List of Projects**

---

- Projects include:
- Real Estate
  - Easements
  - Acquisition
- Physical
  - Tile drains
  - Slurry walls
  - Drainage ditches
  - Shallow well pumping
  - Conveyance improvements

27

---

---

---

---

---

---

---

---

 **Discussion**

---

- Are these groupings okay?
- Are we missing divisions in soil texture, infrastructure, etc. to divide differently?
- Which parcel groups do we have enough information about to say no further analysis is needed?
- Which parcel groups need further analysis of existing data?
- Are there any parcel groups we know already need a project?

28

---

---

---

---

---

---

---

---

Katrina Harrison

**DRAFT HIGH-PRIORITY LOCATIONS FOR ANALYSIS**

29

---

---

---

---

---

---

---

---

 **Priority Parcel Groups**

---

- Selected potential parcel groups for priority evaluation
- Criteria:
  - Observed 2011 seepage AND/OR
  - District manager observed historical seepage AND/OR
  - Shallowest nearby groundwater level above 4 feet, unaffected by irrigation

30

---

---

---

---

---

---

---

---

**As shown in Parcel Group Packet**

**Parcel Group 2**

Reach: 3  
 River Mile: 204.2  
 Bank: Right  
 Area (acres): 149

Review:  
 No further considerations for seepage  
 No present concerns, continued monitoring  
 Historical seepage or flooding observed, evaluation required  
 Interim flows seepage, flooding, or shallow groundwater observed

Status:  
 7/20/2011 Identified as potential parcel group for evaluation

Identified as parcel having historical seepage by: Landowner, District, SCTF, RMC

Nearby Monitoring Wells: PZ-09-R2B-2, 367, 364, 371, MW-10-129, PZ-09-R2B-1

Shallowest Groundwater Level Measured: 4.8 feet below ground surface  
 Measured on: 4/20/2011 in Monitoring Well: PZ-09-R2B-2

Shallowest Groundwater Level Observed in 2011 (depth of surface ponding): -1.60  
 Approximate Max Elevation (NAVD 88): 149.2 Max Flow (cfs): 3700

1D Hydraulic Model Cross-Section Station: 453056

Local flow at which Water Surface Elevation in the SIR is equal to the lowest ground surface elevation assuming flat groundwater gradient (cfs): 1838.7

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Priority Parcel Groups

- What are we missing?
- Are there other criteria for selecting priority parcel groups we should be considering?

37

---

---

---

---

---

---

---

---

### Prioritization Methods - Brainstorm

- Within priority parcel groups -
  - By location
  - By locations observed to flood in 2011 (flows different in different reaches)
  - By locations observed to historically flood (may be missing information)
  - By calculated Friant release flow from HEC-RAS and groundwater threshold assuming flat groundwater table

38

---

---

---

---

---

---

---

---

### Projects Next Steps

- Comments back on parcel groups
- Comments back on data for parcel groups
- Comments back on priority parcel groups
- Prioritization Method within Priority groups
- Initial Projects for each Priority Parcel Group
- Selection Criteria
- Weighting
- Final Project Alternative(s)

---

---

Dave Mooney

## INFORMATION & DATA EXCHANGE

40

---

---

---

---

---

---

---

---

### Brainstorming

- Purpose: Open Forum for further comments
- Possible input includes:
  - Are we missing pieces of site evaluation?
  - Has anyone come up with creative solutions to a challenge?
  - Strategies to avoid inducing seepage?

41

---

---

---

---

---

---

---

---

### Challenges

- Ownership
- Operations and Maintenance
- Water Discharge
- Water Rights
- Long-term Monitoring
- Cost-share
- Terms of an Agreement

42

---

---

---

---

---

---

---

---

Patti Ransdell

## NEXT STEPS AND FOLLOW-THROUGH

43

---

---

---

---

---

---

---

---

### Next Steps

- Feedback from Landowners on Parcel Groups, considerations for parcel groups, and priority parcel groups – July 27
- Set Next Meeting Dates:
  - August 4
  - September 8

44

---

---

---

---

---

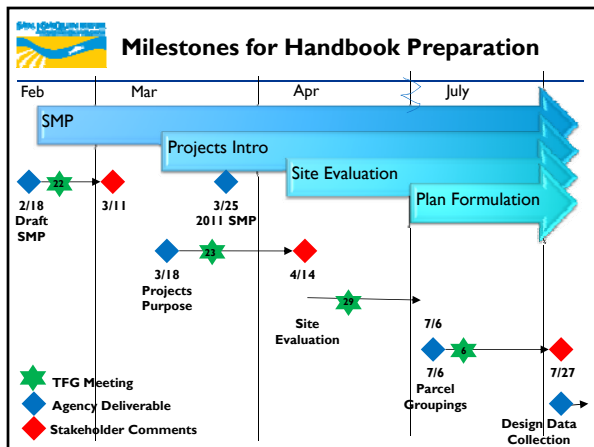

---

---

---

---

---

---

---

---

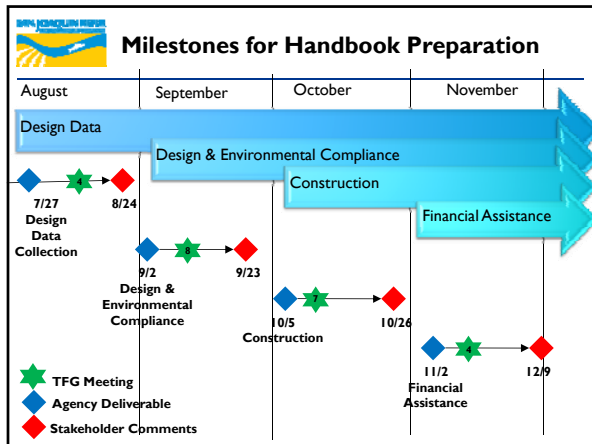

---

---

---

---

---

---

---

---

---

---

---

---

---

**Action Items and Review**

- Update Action Items
  - Revised Actions
  - New Actions
