

Field Activity Advisory Reach 4A Topographic Surveys October 14 – November 15, 2013

The Department of Water Resources will perform levee topographic surveys of the downstream portion of Reach 4A beginning October 14.

Who: California Department of Water Resources (DWR) staff and consultant Provost and Pritchard (P&P). A two person crew including one staff from DWR and one from P&P will be completing the work.

What: DWR and its consultant, P&P, will complete topographic surveys on the Reach 4A levees starting downstream of Highway 152 to Sand Slough Connector. The results of this work will help refine and develop the hydraulic model and evaluate the subsidence rates within the San Joaquin River. This work includes surveys to determine the current elevation of established Reclamation and DWR control points and tops of levees. Top-of-levee surveys will be completed in an all-terrain vehicle combined with satellite GPS survey equipment. Support vehicles will also be present, but will not hinder access when parked.

When: October 14 through November 15 (Specific days to be determined)

Where: Reach 4A, starting just downstream of Highway 152 to the Sand Slough Connector.

If you have questions, please contact the SJRRP Landowner Coordinator, Craig Moyle. Craig's contact information is provided below.
